Abstract :

BE-841545 A

The false ceiling or wall has a frame attached to the structural ceiling or wall, the frame consisting of sections forming the surround. A plastic or fabric sheet is stretched over the frame by means of edging strips which are fixed to the sheet and inserted into the frame sections. The surround of the frame (1) has a shoulder (5) inclined in the opposite direction to that in which the tension due to the stretched sheet is exercised. The edging (6) of the sheet has a hooked section which enables it to be firmly slotted onto the shoulder.
